

## Implementation

The implementation section in the project proposal begins with a presentation of the work plan.

The work plan contains the description of the individual work packages, the listing of delivery performances or the graphic representations of the work plan in the form of Gantt and Pert Charts. The number of **work packages** (WP) must be appropriate the objectives and content of the project. Usually one work package is set up for the management of the project and one for the dissemination and exploitation of the results.

An explanation of the management structures of the project follows in the application. A transnational project requires good management to ensure successful implementation. For this reason, the organisational structure and e.g. the decision-making mechanisms must be convincingly presented.

This is followed by a description of the consortium, where e.g. the complementarity of the participants is to be shown.

The application part **Implementation** concludes with a description of the resources and should be in line with the budget details the online forms. Other given tables refer to the number of planned person months and other direct costs, e.g. travel or equipment.

### Consortium

The importance of each partner for the project must be shown on approximately one page in the administrative forms. Here the experiences of the partner and references are included (incl. 5 of the most important publications for the project and 5 of the most relevant projects/ activities).

### Gantt Chart

Project plan in chronological representation/bar chart (incl. milestones und deliverables)

Templates:
